## IPS / Duct Panelling

Our IPS / Duct Panels are available in Melamine Faced Chipboard (MFC), High Pressure Laminate (HPL) and Solid Grade Laminate (SGL) to suit any Washroom Area. As well as concealing pipework and services, the panels can be used as a design feature as they complete a washroom design.

IPS Panels can be square edged as standard, or post formed on the vertical edges, to give a truly impressive look. The SGL range with its bullnosed edges is suitable for the most demanding areas. Our panels are supplied with Shadow Bands / Flash Gaps which can be supplied to match or contrast the panels. We also supply concealed hook on clips so that no fixings are visible from the front of the panels and allow easy access to the plumbing works when needed. All panels are made to order, this means the designer or the contractor can specify how much gap is to be left between panels, if any, to give a unique appearance.

Panels can be supplied full height (floor to ceiling) or low level with a lid to suit any cubicle, urinal or wall hung wash hand basin.

## IPS Types

### MFC

19mm Melamine Faced Chipboard edged all round with 2mm ABS to match, supplied with laminated MR MDF Shadow Gaps and ke-ku clips to suit.

Suitable for low usage areas, not recommended for Urinals

### HPL

19mm High Pressure Laminated MR Chipboard edged all round with 2mm ABS to match, supplied laminated MR MDF Shadow Gaps and ke-ku clips to suit.

Suitable for Medium usage areas

### SGL

12.5mm Solid Grade Laminate with bullnosed edges, supplied with laminated MR MDF (dry areas) or Solid Grade Laminate (wet areas) Shadow Gaps and ke-ku clips to suit.

Suitable for high usage areas, wet areas
